ABSTRACT OF THE INVENTION

This is an algorithm, method, and means for mould detection in buildings and the like wherein one or more mould detection and notification devices is/are located in locations in the buildings and the like which may be susceptible to the growth of mould and locating a mould notification receiving and displaying device in an accessible location. Upon receiving a notification of possible mould, the mold detection device or a portion thereof is transported to an appropriate facility for determination of the type and severity of mould, if any.
